

# Installation Instructions for Trilock traditional Knobset

## Step 1.

- Fold template where indicated.
- Position template on door edge at desired lock / latch height.
- Firmly hold template and mark latch height and 54mm (2 1/8") lock body hole centre.
- Measure door thickness and mark centre on 'latch height' marking.
- Drill 22mm (7/8") latch hole. NOTE: it is important to drill this hole squarely.
- Drill pilot hole for lock body [suggested size 3mm (1/8")]. Then enlarge hole to 54mm (2 1/8"), drilling from both sides of the door.

**Please note:** Ensure the template position and orientation is as shown, incorrect installation voids warranty.

## Step 2.

- Mark and chisel latch faceplate to a recess of 2.5mm. Use latch carrier as a template.
- Insert lock body into 54mm (2 1/8") hole.
- Insert latch carrier through 22mm (7/8") hole into lock body assembly and fix with 2 screws. **Ensure T-shaped hole at rear of latch carrier is upright!**

## Step 3.

- Check that tapered side of the latch bolt faces towards the door jamb, it may be necessary to un-clip the rear arm **A** of the latch bolt and rotate 180°, this is achieved by pushing the bolt **B** and arm **A** together and un-clipping.

Do not remove (If aligning template has been removed turn square spindle away from the latch bolt housing as far as it can go before inserting the latch bolt).

- Insert the latch through the slot in the carrier until it can go no further.
- Insert the key and turn to retract the latch bolt.
- Ensure cardboard aligning template **C** is NOT removed from lock body.
- Install plastic faceplate shim **D** and faceplate, then screw into position.

## Step 4.

- Remove cut-outs from cardboard template and place over lock body, making sure template is square to door edge.
- While holding template firmly in position, mark remaining 5 holes as indicated on both sides of the door (reversing template as required).
- Drill pilot holes from both sides of the door [suggested size 3mm (1/8")] then enlarge, again from both sides of the door, to sizes indicated on template.
- In particular, ensure the 25mm (1") dia. hole through door face (located above lock body hole) is drilled only to this size, otherwise correct functioning may be impeded—refer template.

## Step 5.

- Install blind screws and brass posts to Trilock external faceplate (this is the faceplate **without** the round snib push-button).

## Step 6.

- Fit snib rotor onto large gear, on the inside of the internal faceplate (this is the one **with** the snib push-button).
- Position snib rotor so one notch faces up and the other notch points to the latch side.

Suits 33mm to 45mm door thicknesses

**NOTE:**

- carefully follow these instructions when installing.
- do not overtighten screws.
- use of power driver is not recommended.
- screws to be tightened to a recommended 2.5Nm torque.
- fully remove the Trilock prior to painting the door to avoid harming the product's finish.
